

We have cleaned up the city

In the golden autumn day, October 10, children of Ufa kindergarten № 35 went to Forest Park to take part in the action of the international program Life-Link. The action was called "Clean up the world." The road to the forest park passed through a school yard, and then a street. In the park, we were divided in small groups and actively set about cleaning it from trash. There were piles of rubbish, it was collected in large black bags, and plastic bottles were collected separately.

Children worked quickly and smoothly, their parents helped very much as well. We have collected as much as 6 bags: two of them were with plastic and glass bottles. TV journalists came and interviewed and Head of the kindergarten Larissa Ryzhova.

After all the litter was collected, all participants were awarded certificates of the Australian organization "Glean Up the World" - the initiator of such actions in the world.

Having returned to the kindergarten children interviewed teachers and parents. The following questions:

- Why forests should not be polluted? Why should one clean up the forest from trash?

were answered by adults as follows:

- Forest is a home for animals, birds and insects. A man should help forest dwellers to live clean and well.

- Forest is the lungs of our city. It helps to clean the air of harmful substances generated by human activities. The purer the forest - the cleaner is the air we breathe.

- Forest should be protected, it is our wealth, it cannot be littered.

40 children and adults participated in this action, and thousands of residents of the city of Ufa have watched a report about it on television.

We hope that many people will become thoughtful that it is necessary to protect the beauty of our native city and our wonderful planet.
